

CI/CD Project

Benefits for us

How to identify if we need CI/CD?

We will look at some symptoms that indicate the need for CI/CD

- Too much time spent on releases and issues and too little on value generation
 - New features integration is hard
 - Conflicts and loss of code due to problems with manual merges
 - Failing tests and difficulty in finding the source of the problem
 - Conflicts between operations and developers
 - Only one engineer can deploy a system
 - Deployments are not cause for celebration
 - And others
-

CI/CD can reduce our costs

- Less time spent on code issues from new developers
 - Automatic cleaning of unused resources
 - Focus of developers on producing value and not on infrastructure configuration
-

CI/CD can increase and protect revenue

- Delivery of value occurring faster
 - Smoother path to production
 - Less time to market
 - Decreased time spent with downtime or serious bugs
 - Faster recovery in case of incidents
-
